

# **USER GUIDELINE**

LITHIUM IRON PHOSPHATE BATTERY

Danger High Voltage	Eye Protection Must Be Worn	Emergency Eye Wash	Caution Risk of Fire Highly Flammable Material
DO NOT touch any terminals or connectors to avoid electric shock.	ALWAYS wear protective clothing and eyeglasses while working with the Lithium Iron Phosphate Battery.	Any uncovered battery material such as electrolyte or powder on the skin or in the eyes must be flushed out with plenty of clean water immediately. Seek medical attention afterwards. Spillages on clothing should be rinsed out with water.	Terminals of the Lithium Iron Phosphate Battery are always live. DO NOT place tools on them. DO NOT short circuit or use outside of the specified electrical ratings.

# Safety Precautions

- Please use circuit breakers, fuses, or disconnects that are appropriately sized by certified electricians, licensed installers, or regional code authorities to protect all the electrical equipment in your system. The battery contains a battery management system (BMS) that protects the battery cells from over-charge, over-discharge, and over-current, however this alone will not protect your system from severe electrical conditions.
- Please verify the polarity before connecting wiring. Reverse polarity can and will destroy the battery.
- DO NOT short-circuit the battery terminals. Doing so can cause bursts in amperage and lead to irreversible damage to the system and the battery (and possibly cause an explosion).
- Please wear proper personal protective equipment when working on the battery.
- DO NOT string batteries in series. Doing so can cause catastrophic failure.
- Please ONLY connect identical batteries in parallel to ensure the best battery performance.
- If the battery shuts off due to low state of charge, please disconnect the battery from your equipment to eliminate parasitic loads and charge the battery as soon as possible.
- It is highly recommended to pair the battery with low voltage disconnect devices in the system setup.

## **Battery Installation**

Safe and reliable installation requires trained and certified technicians. This section can only serve as a guideline as all scenarios cannot be covered.

#### • Wear protective clothing and eyeglasses

#### • Size the battery cables appropriately

Use high stranded copper and heavy gauge cables to handle possible loads from the battery. Make sure to maintain identical cable lengths.

#### Verify correctpolarity

Reverse polarity can and will destroy the battery. Use a multimeter to determine proper polarity.

#### • Tighten the cable connections

Over-tightening cable connections can cause terminal breakage and loose cable connections can cause terminal meltdown or fire.

#### Place the battery in a well-ventilated area

## , Battery Operation 🚿

- Depending on shipping times and the time since manufacture, the battery may be received at a partial state of charge. Please fully charge the battery prior to the first use.
- Standard charging consists of charging at 0.2C constant current until the battery reaches 29.0V. The battery is then charged at a constant voltage of 29V while tapering the charging current. Charging is considered complete when the charging current has tapered to 0.05C. Safe charging requires temperatures between 0°C and 55°C (32°F and 131°F) and takes approximately 5.5 hours.
- For standard discharging, the battery is discharged at 0.2C constant current until the battery reaches 20V. Safe discharging requires temperatures between-20°C and 60°C (-4°F and 140°F).

### **Battery Storage**

- Please charge the battery to 30%~50% and store the battery in an open, well-ventilated, dry, clean area with temperatures of around 23°C (73.4°F).
- Long periods of storage can deteriorate the battery performance. It is recommended to charge the battery at least once every three months to prevent over-discharge.

### **Battery Management System (BMS)**

The BMS will protect and shut the battery down when it is over-discharged or short circuited. In these rare cases, the battery will show 0V voltage. Please activate the battery using an external charging source that has lithium battery activation function. Please contact our Tech Support team at (909)287-7111 for more information about the BMS.

# **Battery Specifications**

Model		RBT2425LFP		
Electric Characteristics	Nominal Voltage		25.6V	
	Rated Capacity (0.2C)		25Ah	
	Energy		640Wh	
	Specific Energy		106.67Wh/kg	
	Internal Resistance		≤40mΩ	
	Cycle Life		>2000 Cycles (25°C , 0.2C, DOD 80%, EOL 80%)	
Charging Parameters	Charge Voltage		29.0±0.2V	
	Maximum Continuous Charge Current		25A	
	Charge Cut-off voltage	此源	29.2V	
Discharging	Maximum Continuous Disc	arge Current	17 <u>2</u> 5A	
Parameters	Discharge Cut-off Voltage		20V	
Temperature Parameters	Operation   Temperature   Bange (60+25% B H)	Charge Discharge	0~55°C /32~131°F -20~60°C /-4~140°F 23±5°C /73.4±9°F	
	Storage Temperature Range (60±25% R.H.)	禁止复	Less than 3 months: -10~35°C/14~95°F Less/than 1 year: 0~25°C/32~77°F	
Mechanical Properties	Dimensions	-ength	197mm/7.7inch	
		Width <sup>火 里 们</sup>	166mm/6.5inch	
	1	leight	168mm/6.6inch	
	Weight		6kg/13.2lbs	
	Housing Material		ABS (Flame Retardant Plastic)	
	Terminal Model		M8 x 1.25 x 12mm	
	Assembly Method		8S7P	

# Protection Circuit Module (PCM) Specifications

Battery Operation Status		Condition	
Battery Overvoltage	Protection	Trigger	Battery Voltage≥29.2V
		Recover	Battery Voltage≤27.6V / Discharge current≥1A
Battery Cell Overvoltage	Protection	Trigger	Battery Cell Voltage≥3.8V
		Recover	Battery Cell Voltage≤3.45V / Discharge current≥1A
Battery Undervoltage	Protection	Trigger	Battery Voltage≤20V
		Recover	Battery Voltage≥22.4V / Charge current≥1A
Battery Cell Undervoltage	Protection	Trigger	Battery Cell Voltage≤2.5V
		Recover	Battery Cell Voltage≥2.8V / Charge current≥1A
Charge High Temperature	Protection	Trigger	Battery Temperature≥131°F (55°C )
		Recover	Battery Temperature≤113°F (45°C )
Disharge High Temperature	Protection	Trigger	Battery Temperature≥140°F (60°C )
Disnarge Fight remperature		Recover	Battery Temperature≤122°F (50°C )
Charge Low Temperature	Protection	Frigger	Battery Temperature≤32°F (0°C)
		Recover	Battery Temperature≥41°F (5°C )
Discharge Low Temperature	Protection		Battery Temperature≤-4°F (-20°C )
		Recover	Battery Temperature≥-5°F (-15°C)
Charge Overcurrent	Protection	Trigger	Charge Current≥27.5A (Delay 15s)
Charge Overcurrent		Recover	(Delay 1min)
	Primary Protection	Trigger	Disharge Current≥27.5A (Delay 15s)
Discharge Overcurrent		Recover	(Delay 1min)
	Secondary Protection	Trigger	Disharge Current≥45±5A (Delay 250ms)
		Recover	(Delay 1min)
Short Circuit	Protection	Trigger	Disharge Current≥1000A
		Recover	Remove Short Circuit (400µs)
